Name

White-tailed deer

Appearance

These deer are small, with light brown fur and a white tail. Young deer are reddish-brown with white spots. This helps them to hide in forests. Male deer grow antlers in the summer, which fall off in the winter.

Habitat

They are found in fields and forests all over the Americas, from Canada to South America.

Diet

They only eat plants: grass, leaves, fruit, and nuts.

Survival fact

Not in danger now, but their numbers were dropping because of hunting.

plant eaters

Name

Mountain Zebra

Appearance

These zebras look like the stripy plains zebras, but they have stronger and pointed hooves to help them climb on rocks. They also have a thin piece of skin on their necks.

Habitat

The mountains of South Africa and Namibia in Southwest Africa.

Diet

They eat grass and plants.

Survival fact

They are in danger, but their numbers are increasing, and is currently at about 35,000.

plant eaters

Name **Jaguar**

Appearance

Jaguars are the third largest cats in the world. They have brown or orange fur with rose-shaped spots. Sometimes their fur is very dark brown so the spots can hardly be seen.

Habitat

Grasslands and forests in Central and South America.

Diet

They eat anything they can find, but, because they are good swimmers, they can also live on fish, turtles, and small alligators.

Survival fact

In danger, the population is decreasing.

big cats

Name **Mountain Lion**

Appearance

They are large with light brown fur. Lion cubs are born with spots, but these spots disappear at about nine months old.

Habitat

This big cat can be found all over North and South America.

Diet

They eat anything they can find, mainly deer, but also rabbits and mice.

Survival fact

In danger, the population is decreasing.

big cats

Name
Goblin shark

Appearance

This fish has a long nose with sharp teeth. It pushes its jaws out to catch smaller creatures that swim nearby. It has large flaps of skin stretch out about three inches, and return again with a yummy snack inside.

Habitat

Cold, deep water seas near Japan.

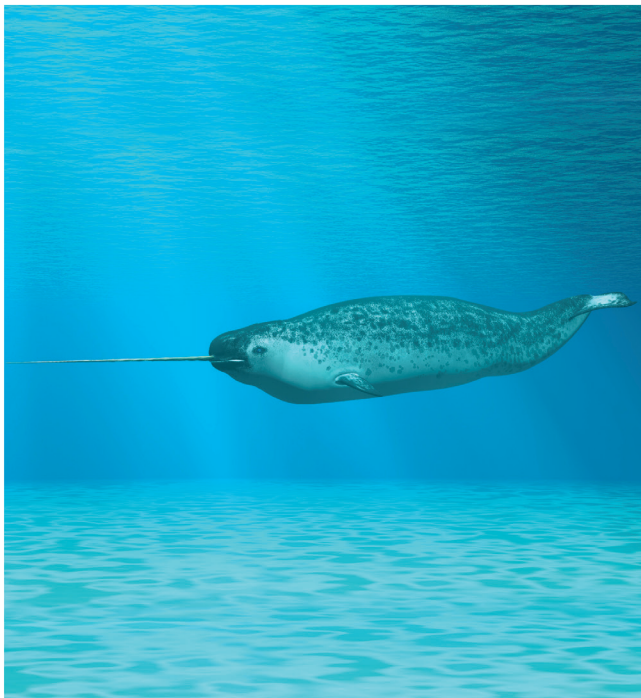

Diet

This shark doesn't chase its food. Scientists think that goblin sharks simply wait for a smaller fish to swim by close enough to become a tasty snack.

Survival fact

We don't know how many exist.

large sea creatures

Name
Narwhal

Appearance

Looks like a unicorn of the sea. Male narwhals have one long horn, or tooth, in the middle of their head.

Habitat

Cold northern waters.

Diet

These mammals eat arctic fish, squid, and shrimp.

Survival fact

They are not in danger.
