

Name _____

1 Read and number.

1. Silk worms make silk.
2. Cotton is a plant.
3. Wool comes from sheep.

What are your clothes made of?

Some clothes are made of natural materials. Natural materials come from plants, animals or the environment. Materials like cotton, wool and silk are natural materials. Cotton is a plant that grows in fields. It's a **renewable resource**, but it needs land and a lot of water. Some farmers say it is the **thirstiest** plant! Jeans, T-shirts and many other clothes are made of cotton. Cotton clothes are usually soft and cool. Silk worms make silk. The worms eat leaves and then make silk cocoons. People **boil** the cocoons to get silk **thread**. Silk is often softer, lighter and more expensive than cotton. When silk is dry, it is one of the strongest natural materials. Some of the finest silk comes from China.

Wool is a renewable resource that comes from sheep and llamas. Wool clothes can be warmer and drier than cotton or silk clothes, so people often make sweaters with wool. Wool dries faster than many other materials because it is water resistant.

silk worm cocoons

2 Read and answer.
