- e. Don't cheat on your test.
- f. Don't die in the Houses of Parliament.

### 2 Read and write T (True) or F (False).

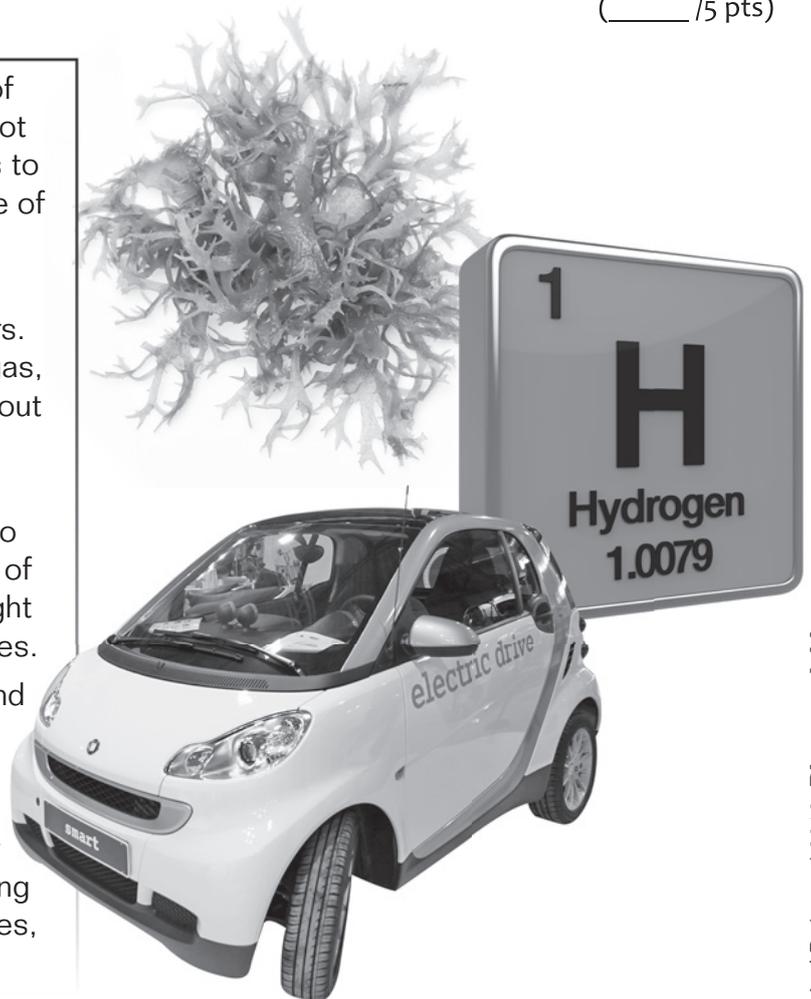

(\_\_\_\_ /5 pts)

Cars are some of the biggest causes of pollution on the planet. That's why a lot of companies are looking into alternatives to traditional gasoline and oil. Here are some of these technologies in development.

Algae, a group of simple plants that grow in water, can provide energy to power cars. Burning the algae releases pollution like gas, but growing the algae takes the pollution out of the environment.

Hydrogen, the lightest chemical element, is a possible source of energy. It leaves no pollution when burned, and provides a lot of power for vehicles like space rockets. Right now, it is difficult to make in large quantities.

Electric cars that use batteries to store and recharge their power are becoming more popular. There are already many on the roads. Of course, the pollution created by these cars depends on the technology used to charge them. If they recharge using solar technology, they will be clean vehicles, for example.

1. Pollution is a big reason to find alternatives to gasoline and oil. \_\_\_\_\_
2. Algae is a plant we can use to power cars. \_\_\_\_\_
3. Hydrogen is a possible alternative, but it also causes pollution. \_\_\_\_\_
4. Hydrogen is difficult to make. \_\_\_\_\_
5. Electric cars create their own energy. \_\_\_\_\_
6. Electric cars are definitely clean vehicles. \_\_\_\_\_

  T    
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_
